

Kuyog

A Collaborative Trip Planning and Live Group Coordination
Mobile Application for Filipino Travel Parties
in the Philippines

Capstone Proposal

Statement of the Problem

Group travel involves planning, decision-making, location coordination, expense tracking, and safety. Filipinos currently handle all of these across multiple disconnected applications, creating confusion, missed updates, and disputes.

1

**Itineraries
Buried in Chats**

Activity suggestions and decisions get scattered across long message threads with no structure.

2

**No Live Group
Awareness**

When members separate, travelers must manually ask for locations or wait for manual updates.

3

**Expense
Disputes**

Manual expense tracking causes confusion about who paid, who owes, and how much.

4

**Connectivity
Issues**

Many Philippine travel destinations have weak data coverage, cutting off app functionality.

Existing Solutions & The Fragmented Toolchain

What Travel Groups Currently Use

Wanderlog	<i>Itinerary Planning</i>
Splitwise	<i>Expense Tracking</i>
WhatsApp	<i>Communication</i>
Google Maps	<i>Navigation</i>
Life360	<i>Live Location</i>
AI Trip Planners	<i>Recommendations</i>

Each app solves only one part of the travel experience

The Result for Travel Groups

- ✗ 5 or more apps open at the same time
- ✗ Repeated data entry across platforms
- ✗ Context and decisions scattered
- ✗ Poor coordination during the actual trip
- ✗ No single view of the full trip state

No single platform covers the full group travel lifecycle

5 Unresolved Gaps

- ✗ Multiple apps required
- ✗ No structured group voting
- ✗ Offline collaboration breaks down
- ✗ Safety tools separate from planning

Introducing

Kuyog

A unified mobile platform built for Filipino travel groups, covering every phase of a trip from planning and decisions to live coordination, safety, and expense settlement, in one application.

One app for every phase of the group trip:

■ Collaborative Planning

■ Live Group Map

■ Expense Settle-Up

■ AI Recommendations

■ SOS Safety System

■ Offline-First Design

Plan Together. Travel Together.

Core Features

Part 1 of 2

01

Itinerary Builder with Group Voting

Members suggest activities, destinations, and schedule changes. The group votes on each proposal democratically, ensuring transparent decision-making, equal participation, and fewer planning conflicts.

02

AI-Powered Travel Recommendations

Using Gemini AI through Supabase Edge Functions, Kuyog recommends attractions, restaurants, accommodations, and activities based on the destination, group size, and trip duration.

03

Asa Ka Uy? Live Group Map

Powered by Mapbox, Kuyog continuously updates all member locations on a shared group map with passive background updates, eliminating the need to manually ask where anyone is.

Core Features

Part 2 of 2

04

SOS Pin Drop

One-tap distress signal that broadcasts the member's exact GPS coordinates, a timestamped alert, and a push notification to every group member, providing a travel-focused safety layer inside the trip.

05

Group Expense Tracker + Settle-Up

Members record expenses in real time and view shared balances throughout the trip. A debt simplification algorithm automatically calculates who owes whom and the minimum transactions required to settle up.

06

Offline-First Design

Before entering low-connectivity areas, users download itineraries, member profiles, and Mapbox map tiles. Core features remain available offline and all changes sync automatically when connectivity is restored.

07

Join by Trip Code

Members join a trip session using a simple code with no prior coordination needed. Supports up to 10 members per group with role-based access for the trip organizer and participants.

How Kuyog Fills the Gaps

Existing Gap	Kuyog Solution
Multiple disconnected apps for every task	Unified platform for the full trip lifecycle
Informal, chat-based decision making	Voting-based itinerary builder
Offline collaboration breaks down	Offline-first sync with auto-recovery
Safety tools separate from travel planning	Built-in SOS pin drop inside the trip
Expense disputes after the trip	Integrated settle-up with debt simplification
No trip-specific AI recommendations	Claude AI integrated through Supabase Edge Functions

Expected Benefits

Better Planning

Organized group itineraries

Collaborative voting on activities

AI-assisted destination suggestions

Better Coordination

Live group location awareness

No manual check-ins needed

Works in low-connectivity areas

Better Safety

One-tap SOS with GPS pin drop

Instant alerts to all members

Travel-integrated safety layer

Better Finances

Real-time expense recording

Transparent shared balances

Automatic debt simplification

Kuyog replaces five separate apps with one platform built specifically for Filipino group travel.

Conclusion

Current travel apps solve individual problems but leave groups switching between five or more platforms. Kuyog unifies the entire lifecycle.

1

Collaborative Itinerary Planning

Voting-based decisions, no more chat-buried plans

2

AI-Powered Recommendations

Claude AI tailored to destination, size, and duration

3

Live Group Coordination

Asa Ka Uy? map keeps everyone visible in real time

4

Built-In SOS Safety

One-tap GPS alert to every group member instantly

5

Expense Tracking + Offline Mode

Settle-up algorithm + offline sync for remote areas

Kuyog

Plan Together.
Travel Together.

Thank You
